#### **DETAILED ACTION**

This Office Action is in response to a communication made on September 3, 2004.

Claims 1-20 are pending in this application

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Stewart (6389460).

Regarding claims 1 and 11, Stewart discloses a method for communicating data comprising: establishing at a cache server a first uniform resource identifier and a header portion associated with a first content item (Column 6, lines 55 - 62; Column 4, lines 56 - 57; lines 35 - 37); caching a second content item corresponding to the first content item (Column 4, lines 43 - 50), the second content item identified by a second uniform resource identifier (Column 6, lines 11 - 22; Column 3, lines 30 - 35; Column 11, lines 13 - 25), the second uniform resource identifier comprising the first uniform resource identifier and information from the header portion (Column 4, lines 38 - 41); receiving a first request at the cache server, the first request requesting the first content

Art Unit: 2155

item, the first request comprising the first uniform resource identifier and the header portion (Column 4, lines 35 - 37); comparing the first uniform resource identifier and the header portion to predefined criteria (Column 8, lines 46 - 49); generating a second request based on the criteria, the header portion, and the first uniform resource identifier, the second request being associated with the second content item, the second request generated by combining information from the header portion and the first uniform resource identifier to yield the second uniform resource identifier (Column 4, lines 56 - 66); and retrieving the second content item based on the second uniform resource identifier of the second request (Column 5, lines 1 - 4).

Regarding claim 2 and 12, Stewart discloses that the header portion comprises a hypertext transport protocol header portion; and comparing the first uniform resource identifier and the header portion to predefined criteria further comprises; examining a hypertext transport protocol identifier portion associated with the first content item; comparing the hypertext transport protocol identifier portion to the criteria; examining the hypertext transport protocol header portion associated with the first request; and comparing the hypertext transport protocol header portion to the criteria (Column 4, lines 55 - 66; Column 8, lines 46 - 49).

Regarding claims 3 and 13, Stewart discloses that the predefined criteria comprises match criteria and an associated transform (Column 8, lines 46 – 49; Column 4, lines 57 – 63).

Regarding claims 4 and 14, Stewart discloses that the transform comprises at least one rule indicating how to modify the hypertext transport protocol identifier portion

Art Unit: 2155

associated with the first request to generate the second request (Column 11, line 64 – Column 12, line 8).

Regarding claims 5 and 15, Stewart discloses that the transform comprises at least one rule indicating an element associated with the hypertext transport protocol header portion of the first request to be associated with the hypertext transport protocol identifier portion of the second request (Column 12, lines 5 – 19).

Regarding claims 6 and 16, Stewart discloses that the match criteria comprises at least one entry, each entry comprising a portion of a hypertext transport protocol identifier and comparing the hypertext transport protocol identifier portion to the criteria comprises comparing each entry to the hypertext transport protocol identifier portion of the first request (Column 9, lines 11 - 24).

Regarding claims 7 and 17, Stewart discloses retrieving the second content item comprises: retrieving the second content item based on the second request from the cache server when the second content item is available from the cache server (Column 9, lines 32 - 46; Column 11, lines 13 - 26); and retrieving the first content item based on the first request from the origin server when the second content item is unavailable from the cache server (Column 9, lines 46 - 55; Column 7, lines 58 - 62).

Regarding claims 8 and 18, Stewart discloses the second content item is related to the first content item (Column 10, lines 14 - 25).

Regarding claims 9 and 19, Stewart discloses that the second content item comprises a version of the first content item customized in response to data in the header portion associated with the first request (Column 12, lines 5-6).

Art Unit: 2155

Regarding claims 10 and 20, Stewart discloses generating the second request comprises: adding a hypertext transport protocol identifier portion of the first request to a hypertext transport protocol identifier portion of the second request; and associating an element associated with the header portion associated with the first request with the hypertext transport protocol identifier portion of the second request (Column 4, lines 56 – 66).

#### **Prior Art**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U. S. Patent No. 6185598 issued to Farber, because it discloses transforming a URL request in a cache server system.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Bates whose telephone number is (703) 605-0633. The examiner can normally be reached on 8 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on (703) 308-6662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
